 🎮 Aura4G

Profile

Final-year Computer Science student at the University of Exeter, having successfully completed all degree requirements (graduation ceremony scheduled for July 2026), with a strong focus on AI and software engineering. Experienced in building machine learning models and full-stack applications, with leadership experience as a co-founder and lecturer of a 150+ student AI workshop. Seeking software engineering or machine learning opportunities.

Education

University of Exeter Sept 2023 – July 2026
BSc in Computer Science

- **Achieved 2:1**
- **Relevant Modules:** Machine Learning, Cybersecurity, Computer Vision, High Performance Computing, Data Science at Scale.
- Co-Founder and Lead Lecturer - ExeAI (Jan. 2025 - Feb. 2026)
- Workshop Manager - ExCode (Oct. 2025 - December 2025)

Twynham 6th Form Sept 2021 – Aug 2023
A-Levels

- **Subjects:** Mathematics (A), Computer Science (B), Geography (B)
- Mental Health Ambassador
- Volunteering at Mind's charity shop as part of Cultural Enrichment

Experience

Second Place Winner - Hackathon Exeter
Hacksouthwest Feb 2026

- Collaborated in a team of 4 for 24 hours to develop a web application using **Golang** and **Typescript**
- Built a linear regression model in **Go** to analyse and forecast monthly cash flow trends.
- Presented the project to judges, demonstrating strong communication skills and effectively highlighting both the corporate benefits to non-technical audiences, and efficiency benefits of my model to technical audiences
- Details of the project can be found at devpost.com/software/garbo 🔗

Lecturer Exeter
ExeAI Jan 2025 - Feb 2026

- Presented comprehensive lessons to **over 150 students** of a variety of disciplines over the course of 4 weeks
- Received an average score of **4.5/5** in feedback from students
- **Received a Guild Award** as part of the Google Developer Student Club team.

Projects

Swin-Xception Transformer Model Architecture github.com/Aura4G/Swin-Xception-for-FER 🔗

- Developed a **Shifted Window Transformer-based model in PyTorch** that uses a depthwise separable feedforward network in favour of the standard MLP, trained to classify 7 different types of facial expressions.
- Achieves a **Weighted Average Recall of 79.24%** on the RAF-DB dataset.
- **Tools Used:** Deep Learning, Python, PyTorch, CUDA, Jupyter Notebook, PyQt, Cascade Classifiers

Sudokrazy github.com/Aura4G/sudokrazy 🔗

- Developing a sudoku video-game for Windows distributions, with colourful visuals, difficulty settings, including a shuffle mode, and an in-game shop.
- **Tools Used:** C++, SFML, GLSL

Skills

Languages: C++, C, Java, C#, Python, Haskell, GLSL

Frameworks & Tools: Django, JUnit, Unity, Blender, SFML, Git, Linux, React, TensorFlow, Keras, CNN and ViT Training and Testing, PyTorch, CUDA
